

**Amendment to the Specification:**

Amend the paragraph spanning page 13, lines 1-12 as follows:

Figure 10 shows a further exemplary embodiment of a unit of active substances [18] 5, a resonator type with a forked resonator 1 open on one side or closed on both sides with a very homogeneous transverse field again being suitable for precise mass and moisture measurement. Since the units of active substances 5 are deposited in depressions 22 on the guide 18, the exact position of the units of active substances is known exactly, so that easy further sorting of the units of active substances is also possible here. As in Figure 9, the microwave influence of the active substance unit guide 18 must be ensured by initial taring, and its change must be ensured by point-by-point monitoring of the guide online. Here, too, format changes of the units of active substances require replacement of the guide 18, which is designed as an endless belt here, but these can be carried out simply.
